

PADDLE TECHNOLOGY

ETCHED CARBON FACE

Vertically etched carbon fiber graphite surface provides the 'bite' players need to bend the ball to their will with durability & long lasting spin production.

18K CARBON FIBER

18,000 carbon fiber filaments threaded with a tri-axial pattern creates a stunning visual 3D effect on the face while also allowing spin to be achieved at any angle.

AERO GUARD

Accelerates air flow across the thickness of the paddle. This helps players achieve quicker resets and protection with a more durable edge guard overall with dramatic valleys and ridges absorbing impact.

HONEYCOMB CORE

Durable honeycomb is the innermost layer of our paddles. Responsible for its performance on the court and is composed of an array of hexagonal cells providing strength and stability.

EDGE SHIELD PRO

Enhances the paddle's durability without sacrificing its sleek aesthetics. The extra lip of high-density plastic on the corner gives you protection from the ground and scrapes while playing.

REPLACEABLE GUARD

Our customizable edge guard is constructed to be flush with the surface so players can take advantage of every inch of the face. Replaceability allows your paddle to be custom & last long.

SPIN RP

A 2-component polyurethane coating which creates a subtle tacky feel for enhanced ball contact & grip for control & spin with every swing.

3X L-CORE

Paddles with this feature are made with an aramid honeycomb sandwiched with polypropylene honeycomb on each side. Provides exceptional stability, power, and reactivity with excellent ball control & feel.

EDGELESS DESIGN

The edgeless edge guard design allows for an increased surface area allowing for more precise and controlled shots while taking advantage of the entire face.

CMS

The entire paddle is hot press molded & injected with foam around the edges for control, stability, & comfort. Provides power and an extra pop to each shot.

FS SYSTEM

Flex Stabilization (FS) System originally used in our tennis rackets utilizes a high density foam injection around the outer edge. This makes the paddle more stable & durable during gameplay.

eTPU

This foam face offers sound dampening qualities, reduced vibrations, with a lightweight & durable feel.

GRIT PAINT

This rough texture helps players generate more spin on the ball improving control & performance during games.

HMT FIBER

A blend of hot melt glass fiber to give power to your baseline strokes & put away as well as a rough surface to get added spin.

DUAL FOAM CORE

Muffles vibrations with two layers of foam providing added comfort to every swing. Utilizing EVA foam further adds to the power and sweet spot.
